

Subject: Flight manual, max. weight of the non lifting parts

Effectivity: DG-400 all serial No.'s

Accomplishment: within 30 days

Reason: Due to the high strength of the wings, it is possible to raise the max. weight of the non lifting parts about 10 kg (22lbs), to make a cockpit load of 110 kg (242 lbs) still possible with extensive equipment.

Instructions:

1. Change in the flight manual page 19, August 1984 320 kg (705 lbs) instead of 310 kg (683 lbs).
2. Raise of the value for the maximum weight without wing ballast about 10 kg in the table flight manual page 21 and in the actual weight and balance record.

Remarks: All instructions may be executed by the owner himself and are to be entered in the logbooks mentioning TN 826/8.
