

SUBJECT : Control quick connectors type "Hotellier" /
securing sleeves

EFFECTIVITY : DG-400, DG-200, DG-100

ACCOMPLISHMENT : . / .

REASON : Securing the airbrake "Hotellier" connectors
with spring pins is uncomfortable, therefore
securing with sleeves is now certified.

INSTRUCTIONS : 1. Instead of the spring pins securing
sleeves S 26 may be pushed over the air-
brake quick connectors and secured by
strings to the pushrods, see sketch.

2. For connecting or disconnecting the air-
brake control the sleeve must be rotated
to make free the opening for the rotule.
After engaging the "Hotellier" connectors
the sleeve must be rotated 180° to close
the opening.

Warning: Despite the securing sleeve
the correct locking of the "Hotellier"
connectors must be checked. The hole for
the spring pin in the sliding latch must
be visible.

3. The securing sleeves must be replaced
every two years to provide adequate
clamping force.

MATERIAL : 2 items securing sleeve S 26 with string.

WEIGHT AND
BALANCE : no effect
